# Online google maps earth view satellite

Behind the Scenes of 3D Imagery Google Earth is the most photorealistic, digital version of our planet. Where do the images come from? How are they they put together? And how often are they updated? In this video, learn about the pixels, planes, and people that create Google Earth’s 3D imagery. Navigating has come a long way since the days of wrestling with paper maps that never seemed to fold up right again once you opened them. Google Maps is one navigational tool that will help you get where you need to go.What Is Google Maps?Google Maps began back in 2005 as a proprietary web application of Google. Over the years, Google has enhanced the mapping service to increase its capabilities. Not only can you get step-by-step directions to get you places, you can also estimate distances and travel time between points, find your location, research routes, get real-time traffic information and share your location with others.Google Maps OptionsGoogle Maps has a number of options that will help you see your world in a variety of ways.If you’re looking for a specific place or a type of place, you can search within Google Maps. You’ll get returns that you can click and save for later.Once you get a map loaded, you can click on it to zoom in for extra detail. You can also zoom out to see a whole different perspective.When you’re trying to choose the best travel route to get from one place to another, Google Maps will give you all the pertinent information you need about landscape, construction and current traffic.Use Google Maps Street ViewUsing the Google Maps Street View option is a fascinating way to really explore the world without even going anywhere.With Google Maps open, click the menu in the top left corner. Search for a place within the Google Maps interface. Once the map shows the place, click the spot on the map where you want to see the street view. A little picture will appear at the bottom of the map. Click on the picture to go to Street View. You can then adjust your view with your cursor. When you’re finished, click the arrow in the upper left corner to go back to the map. You can click the map again in a different location if you want to see another Street View perspective.Google Maps Driving DistanceTo get information about driving distances, open Google Maps and search for your starting location. Once this location opens and displays on the map, right-click at the spot from which you want to begin measuring. Choose “measure distance” from the pop-up menu. Click the spot you want to go, and Google Maps will display the distance between the two points. If you click elsewhere on the map, Google Maps will add the distance to your total.Google Maps Satellite ViewWhen you want to get another perspective on your world, Google Maps Satellite View is the way to go. With the basic Google Map application open to a location, click “satellite” icon in the lower left corner. Your view will instantly change to a satellite view from above. You can go back to the basic map view by clicking the “map” icon in the lower left corner. MORE FROM QUESTIONSANSWERED.NET Google Maps does more than just help you get from point A to Point B. It’s a fun learning tool for kids studying geography, and it has a variety of functions that enable creativity in how it’s used.Turn Teaching About Travel Routes Into an Interactive GameMap reading is a skill some people struggle with, and by using Google Maps on a tablet or computer monitor, geography students have the chance to see routes and landmarks in a way that makes everything more clear. Let students choose a fun destination, such as a theme park, and then plan the route by using Google Maps. Encourage learners to check out the different routes suggested and choose the best one.Simplify Learning About Math and MeasurementsGoogle Maps provides distance measurements for you based on the beginning and ending points selected for each route. To make using this function into a learning game, Have the student physically measure the map and compare the measurement to the map scale without seeing the information in Google Maps. Using a paper map is one easy way to achieve this. This is also a great time to throw in a basic lesson about calculating ratios. Then have the students calculate the distance and check to see how close the calculated results are. Let the student or group with the closest answer choose the next set of points to measure as a simple reward.Add an Interactive Touch to History LessonsIf you’re teaching a history lesson about an event where people physically went from one place to another, Using Google Maps Satellite views lets everyone see the lay of the land. The Google Maps distance function provides a way for students compare a familiar distance, such as the length of the walk from home to school, to the route taken by historic figures.Online Treasure Hunt for Young KidsThe Google World earth map is handy for making a treasure hunt that takes kids’ imagination anywhere on the planet without leaving their seats. To prepare, choose some unique sites around the world, and prepare clues that include fun facts for the students to use to discover the destinations.Real Life Treasure Hunt for Older Kids and AdultsSend older kids or adults on a poker-run style treasure hunt by choosing a series of locations to find within a specific distance range, such as five or ten miles. Write clues based on information that’s available in Google Maps. Add quirky prizes to be awarded at each stop to make it even more fun for each player or team. MORE FROM QUESTIONSANSWERED.NET Search [] satellite World map - share any place, ruler for distance measuring, find your location on the map. Every street maps for most cities of USA. Address search, cities lists with capitals and administrative centers highlighted; states and regions boundaries; roads, streets and buildings satellite photos; airports and seaports, railway stations and train stations, river stations and bus stations; POI - hotels, banks, bar, coffee, restaurants, gas stations, parking lots and groceries, landmarks, post offices and hospitals on the interactive satellite map of the World/Earth. World map Google Earth (and Google Maps) is the easiest way to get a satellite view of your house and neighborhood. This gives you a fascinating application that enables anyone to view nearly any part of the world, get instant geographic information for that area, and even see your house with an aerial view. In this article, we'll show you how to take advantage of Google Earth's high-resolution satellite images and find your house to get an aerial view. Google Earth Pro is completely free to download on desktops, and you can even use the web version in Chrome and the mobile apps on Android or iOS. Google Earth also runs on Firefox, Edge, and Opera. Google Earth Satellite View vs. Google Maps Google Earth and Google Maps use the same satellite/aerial and street view imagery to give you some amazing data on our planet. Few things like searching, and directions are also similar in both. But there are important differences between Google Earth and Google Maps too. Google Earth is a 3D virtual globe while Google Maps is used more like a 2D map even though it has 3D features. Google Maps is a more powerful local tool. Google Maps allows you to find and share directions and explore your locality with a fine-toothed comb. It also keeps this information synced across all your devices. Google Earth and its satellite imagery may look the same when you compare it with Google Maps. Both have the satellite layer. But it offers an important distinction: a better set of Layers. Thanks to the Voyager feature inside Google Earth, you can explore interesting cultures and our planet's nature in all its glory. As the video below tells you, Google Maps is for finding your way, Google Earth is for getting lost. In short: When you want to go from Point A to Point B, use Google Maps. When you want to explore the world in all its high-resolution 3D glory, use Google Earth. Launch Google Earth for some fun virtual trips, and then tap into its many practical benefits. 1. View Your House With Google Earth The virtual trips allow you to visit any country on Earth. But you will still go on it to find your own house. You can fly down from outer space and zoom down to the street level. Searching for a satellite view of your house works on all versions of Google Earth. The screenshot below is from Google Earth Pro for the desktop that can be used for more advanced uses like import and export of GIS data. To find your own house: Go to the search box on the top left and enter your address. Double-click your address in the search results. Google Earth will fly you to your neighborhood. Drag the Pegman icon to access Street View and get an up-close look at your home. Use the button on the top-right to switch between Street View and a ground-level view of your house. Select the Exit ground-level view to revert to the aerial view of your house. You can search for any location by address, business name, latitude-longitude coordinates, keywords, and locale name. If it's a new neighborhood, you can walk around virtually and get to know the services and businesses around your locality. Google Earth also thinks that you head straight to your home to take in a satellite view. That's why they took this idea and created a unique storytelling project called This is Home. So, instead of staying put at your own house and thereabouts, why not go over and see how the Inuits live in igloos or the unique Santorini Islands in Greece. 2. Take Virtual Trips From Your Couch Google Earth is made for exploration and geographic discoveries. There are some fascinating virtual tours on Google Earth. New locales and timely tours are always being added, so you will never fall short of places to explore with Google Earth and its Voyager feature. For instance, go to Voyager > Culture > Superhero Movie Locations and head to the places where blockbuster scenes in superhero films have been captured on camera. 3. Measure Distances Big and Small You are looking at the aerial view of your home on Google Earth. Maybe, now you would like to measure the plot of land it is standing on or calculate a nearby parcel you have your eyes on. Instead of manually stretching the tape, use Google Earth's Measure Tool to do it in a few minutes. On Google Earth Pro you can use lines and shapes to check distances and estimate elevations. For instance, you can use the elevation information to plan hikes around your countryside. On Google Earth Web, Android, and iOS you can use the Measure Tool to calculate the perimeter or distance between points on the map (see screenshot). 4. Use Historical View to Go Back to the Past Google Earth Pro has a slider tucked away on the toolbar that works like a time machine. Imagine you are looking at the satellite view of your house or any other location and would like to see how it looked in the past. You can do three things to access historical imagery for the location. Go to the menu and select View > Historical Imagery. Click the Historical Imagery button on the toolbar (a clock with an arrow pointing counterclockwise). Click on the date in the lower-left corner of the Google Earth window. Google Earth will jump to the oldest historical imagery available. 5. Monitor Disaster Alerts in Near Real Time Google created a product called the Google Crisis Map to help people stay aware of developing natural disasters like hurricanes, storms, earthquakes, and more. The crisis map uses Google Maps technology to make this information easily available in almost real time on any device with a browser. The crisis map also collates the information spread across multiple agencies and makes it easier to understand for the layman. Of course, it won't offer you a satellite view of your house in real time but you can at least estimate the precautions you need to take as the disaster flows or ebbs. For a more detailed walkthrough, head over to the Google Help Page. Keep an eye on the SOS alerts and navigation warnings. Google Maps on iOS and Android supply real-time visual disaster warnings in the event of hurricanes, earthquakes, and floods. Map overlays and crisis cards will give you more information with emergency phone numbers, safety tips, and even push alerts. 6. Create a Satellite Tour of Your House Google Earth guided tours under Voyager are all professionally made. But Google Earth also allows you to create your own projects that can work like virtual tours of your town, city, or any other favorite place of your choosing. This official Google walkthrough describes how your own virtual tour with the satellite views on Google Earth. Search Google Earth for the Best Views Browsing Google Earth can be addictive. Go through the stunning Google Earth satellite images on Earth View and I am sure you will get hooked on the immersive landscape photos. And yes, you can download them as wallpapers for your desktop too. What Is Starlink and How Does Satellite Internet Work?
